

FRANKLINE ODERO

Senior Software Engineer | Flutter & Full-Stack | Mobile Products | AI & Fintech

Nairobi, Kenya | +254 716 843 583 | franklineodero@gmail.com | [GitHub](#) | [Portfolio](#) | [LinkedIn](#)

SUMMARY

Senior Software Engineer with 5+ years building production mobile, web, and backend systems used by over 100,000 people. Specializes in scalable mobile architecture, cloud infrastructure (Firebase, Firestore, FastAPI), and fintech products, with hands-on experience in AI-driven tooling, wearable/health integrations, and cross-functional technical leadership. Track record of mentoring engineers and owning products end-to-end, from architecture through release.

TECHNICAL SKILLS

Languages: Dart, Python, TypeScript, JavaScript, PHP, C#

Mobile Development: Flutter, Android SDK, State Management (BLoC), Health/Wearable Integrations (Health package, Terra API), NFC/Hardware Integration (IoT)

Frontend: Angular, React, Responsive UI/UX

Backend & Cloud Services: FastAPI, Node.js, Laravel, GraphQL, Terraform, Apache, RESTful APIs, Firebase (Firestore, Auth, Cloud Functions)

Databases: PostgreSQL, MySQL, SQLite, Firestore, Hive

Architecture & Practices: Clean Architecture, System Design, Dependency Injection, CI/CD, Unit & Integration Testing, Agile/Scrum

Tools & Platforms: Git, Docker, Google Play Console, App Store Connect, Bitbucket, Jira, Postman

WORK EXPERIENCE

Senior Full-Stack Engineer — ITalanta / Elewa

Nairobi, Kenya | Jan 2022 – Present

- Architect and scale multi-platform Flutter applications (mobile and web) — spanning frontend, backend integration, testing, and release pipelines — serving 100,000+ active users, with end-to-end ownership from system design through App Store and Google Play deployment.
- Engineer resilient backend services and complex third-party integrations, including health/wearable data pipelines (Terra V2 API) with custom chunking logic to guarantee high data reliability under heavy syncing workloads.
- Design modular Clean Architecture and shared Flutter UI component libraries, accelerating feature delivery timelines by ~30% and reducing regressions across product lines.
- Develop and maintain Node.js, FastAPI, and GraphQL/REST APIs, optimizing database query performance (PostgreSQL, Firestore) to minimize latency and server overhead.
- Lead deployment, CI/CD, and release compliance, resolving cross-platform store requirements and reducing build/release cycle friction.
- Drive technical leadership and mentorship, establishing code quality standards, conducting code reviews and formal mid-probation performance evaluations for engineering interns, and onboarding junior engineers on BLoC state management and testing best practices.

Full-Stack Engineer — Savanna Dot Net

Nairobi, Kenya | Sep 2021 – Jan 2022

- Built and shipped web applications end-to-end with Laravel and PHP, focused on performance, scalability, and user experience.
- Developed native Android applications extending the company's web platform into a cross-platform offering.
- Integrated blockchain and fintech features, including NFT support and a trading platform module.

Full-Stack Engineer — Techxers Kenya Ltd

Nairobi, Kenya | Jan 2020 – Aug 2021

- Delivered production websites and Android apps using Laravel, Node.js, React, and Flutter across multiple client projects, including KaziOnline, CDL, and NeutronIT.
- Mentored a team of 4 junior developers on technical practices and project delivery.

Co-Founder & Lead Developer — Creators Galaxy Inc

Nairobi, Kenya | Nov 2019 – 2022

- Built the backend engine and led development for mobile games (Anarchy, Grudge Guess) using C#, Unity, and SQLite.

Software Developer (Freelance) — Fiverr

Nairobi, Kenya | Jan 2019 – Nov 2019

- Delivered freelance projects spanning a digital census web platform and a health-education mobile app.
- Built embedded security/IoT systems, including custom data-stream parsers for ST25 series NFC tags and Bluetooth permission handling for reliable hardware-software integration.

SELECTED PROJECTS

Pesa Radar — Personal Finance App — Flutter, Firebase, Firestore, Hive, BLoC

- Architected an offline-first Flutter finance-tracking app using clean architecture (domain/application/infrastructure layers), with Firestore for cloud sync and Hive for local storage.
- Built an encrypted, checksum-verified (SHA-256) cloud backup and restore system with compression and chunked Firestore writes to safely handle large payloads within platform document-size limits.
- Built custom named-group regular expression engines to parse automated SMS transaction alerts across multiple banks, powering reliable automatic transaction ingestion.

Smart Running — Marathon Training App — Flutter, Health API, Terra, FastAPI

- Built a multi-step onboarding system (Flutter, BLoC, go_router) supporting new-user signup, profile editing, and activity-based upgrade flows.
- Engineered a health/wearable sync architecture using the Terra V2 API and Health package, processing activity and biometric data into personalized training profiles.
- Managed App Store and Google Play compliance reviews, including refactoring iOS Info.plist permission declarations and restructuring backend-driven workout sync flows to meet platform requirements.

MyBlueprint — ITalanta Elewa — Flutter, Node.js, Firebase, Swift, Kotlin

- Cross-platform habit-tracking and goal-setting app live on iOS and Android with 30,000+ users.

Farmbetter — ITalanta Elewa — Angular, GraphQL, Firebase, Flutter, TypeScript

- Multi-platform agri-tech application serving 100,000+ farmers and extension agents across 10+ countries — built as a Flutter mobile app, Angular web app, and GraphQL/Firebase backend.

EDUCATION

B.Sc., Computer Technology — Maseno University

Kisumu, Kenya | Sep 2014 – Dec 2018

Second Class Upper Division

Certificate in Information Technology — Wantech Computer College

Nairobi, Kenya | 2014

Distinction
