FRANKLINE ODERO

SOFTWARE ENGINEER | BACKEND & FULL-STACK | CLOUD-NATIVE SYSTEMS

Nairobi, Kenya • +254 716 843 583 • franklineodero@gmail.com

GitHub • LinkedIn • Portfolio • Medium

PROFESSIONAL PROFILE

Software Engineer with 5+ years delivering production backend, web and mobile systems, including products reaching 100,000+ users. Build Python/FastAPI and Node.js services, API integrations, cloud data pipelines and cross-platform applications. Experienced with GCP, Terraform, CI/CD and wearable-device integrations, with end-to-end ownership from architecture through release and a track record of mentoring engineers.

TECHNICAL EXPERTISE

Backend & APIs: Python, FastAPI, Node.js, REST, GraphQL, Laravel, Firebase Cloud Functions, .NET

Cloud, Data & DevOps: GCP (Dataflow, Pub/Sub, BigQuery), Apache Beam, Terraform, Docker, GitHub Actions, CI/CD

Frontend & Mobile: TypeScript, JavaScript, Angular, React, Flutter, Dart, Android SDK, BLoC

Databases & Storage: PostgreSQL, MySQL, Firestore, SQLite, Hive

Engineering Practices: Clean Architecture, system/API design, offline-first sync, dependency injection, unit & integration testing, code review

Additional: PHP, C#, C++, NFC, ESP32, Arduino, PlatformIO; Kubernetes and Helm (hands-on learning)

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer | ITalanta / Elewa Jan 2022 – Present

Nairobi, Kenya

- Build and maintain Python/FastAPI and Node.js services, GraphQL and REST APIs, and PostgreSQL/Firestore integrations for production mobile and web products.
- Develop SmartRunning wearable integrations across Terra V2, Garmin, COROS and Suunto, addressing provider-specific authentication, activity import, workout synchronization and retry handling.
- Contribute to Apache Beam, Google Cloud Dataflow and BigQuery pipelines that process activity and training data for analytics and downstream application services.
- Maintain Terraform infrastructure and GitHub Actions CI/CD workflows for testing, builds, deployments and environment management across development, staging and production.
- Ship Flutter, Angular and React functionality across SmartRunning, FarmBetter, MyBlueprint and Goodless, including offline workflows and NFC-enabled capabilities.
- Mentor junior engineers and interns through code reviews, onboarding and architecture/testing guidance; support engineering standards and release quality.

Full-Stack Engineer | Savanna Dot Net Sep 2021 – Jan 2022

Nairobi, Kenya

- Developed Laravel/PHP web applications and native Android features, extending client-facing services across web and mobile platforms.
- Integrated fintech and blockchain functionality, including NFT support and a trading-platform module.

Full-Stack Engineer | Techxers Kenya Ltd Jan 2020 – Aug 2021

Nairobi, Kenya

- Delivered full-stack client products (KaziOnline, CDL and NeutronIT), building React interfaces, Laravel/Node.js APIs, dashboards, authentication and database-backed workflows.
- Mentored four junior developers on debugging, code reviews and delivery practices while contributing from development through deployment.

Co-Founder & Lead Developer | Creators Galaxy Inc Nov 2019 – 2022

Nairobi, Kenya

- Led development of mobile games including Anarchy and Grudge Guess, building gameplay systems and data persistence with Unity, C# and SQLite.

- Created reusable Unity tooling, Blender 3D assets and Python scripts supporting production game development and publishing.

SELECTED ENGINEERING PROJECTS

SmartRunning | Elewa · Wearables / Health-tech

Contributed Flutter onboarding and training experiences, FastAPI-backed integration workflows, and Terra V2 wearable synchronization. Supported activity-data processing using GCP services and production release workflows.

Pesa Radar | Independent · Fintech / Android

Designed and published an offline-first personal finance app that converts M-PESA and bank SMS alerts into structured transactions using provider-aware parsing, deduplication and analytics. Implemented Hive storage, Firestore synchronization and checksum-verified cloud backups.

FarmBetter | Elewa · Agri-tech

Built mobile and web functionality for an agricultural advisory platform serving 100,000+ farmers and extension agents across 10+ countries; supported low-connectivity workflows and GraphQL/Firebase integrations.

MyBlueprint | Elewa · Productivity

Delivered features for an iOS/Android habit and goal-tracking application with 30,000+ users, including task and roadmap workflows, Firebase integrations and production releases.

CERTIFICATIONS

LFS158: Introduction to Kubernetes | The Linux Foundation | 2026

Introduction to Containers, Kubernetes, and OpenShift | Cognitive Class | 2026

EDUCATION

B.Sc. Computer Technology, Maseno University — Second Class Upper Division 2014 – 2018

Certificate in Information Technology, Wantech Computer College — Distinction 2014
