PROFESSIONAL SUMMARY

Software Engineer with 5+ years building and shipping production systems across backend, web, and mobile, including platforms serving 100,000+ users. Own features end-to-end at Elewa Creative Hub, from architecture and API design to third-party integrations, CI/CD, and release. Specialise in Python/FastAPI, Node.js, and PostgreSQL backends with Angular, React, and Flutter frontends, and have built wearable health-data integrations (Terra, Garmin, COROS) and fintech products. Mentor engineers and shape architectural standards.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, PHP, C#, C++, Dart

Mobile: Flutter, Android SDK, BLoC, Deep Linking, Push Notifications, Health & Wearable Integrations

Frontend: Angular, React, Responsive Web Development

Backend & APIs: FastAPI, Node.js, Laravel, GraphQL, .Net, RESTful APIs, Firebase Cloud Functions

Cloud & DevOps: Docker, Kubernetes, Helm, Terraform (IaC), Firebase, GitHub Actions, CI/CD, Apache Beam, Dataflow, Pub/Sub

Databases: PostgreSQL, MySQL, SQLite, Firestore, BigQuery, Hive

IoT & Hardware: ESP32, Arduino, PlatformIO, NFC, Wi-Fi/HTTP device communication

Architecture & Practices: Clean Architecture, System Design, API Design, Dependency Injection, Unit & Integration Testing, Code Reviews, Agile/Scrum

Tools: Git, GitHub, Bitbucket, Jira, Postman, Google Play Console, App Store Connect

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer | **ITalanta / Elewa** Nairobi, Kenya | Jan 2022 – Present

- Built and shipped production backend, web, and mobile systems across products including SmartRunning, FarmBetter, Goodless NFC, and MyBlueprint, contributing to platforms serving 100,000+ users.
- Built and maintained Python/FastAPI, Node.js, GraphQL, and REST services backed by PostgreSQL, Firestore, and Firebase, owning features from architecture and API design through testing and production delivery.
- Engineered health and wearable-data integrations for SmartRunning across Terra, Garmin, COROS, and Suunto, implementing resilient synchronization, chunking, retry, and provider-specific handling for activity and workout data.
- Contributed to data-processing pipelines using Apache Beam, Google Cloud Dataflow, and BigQuery, transforming activity and training data for analytics and downstream application services.
- Built and maintained GitHub Actions CI/CD pipelines and Terraform-based infrastructure, automating testing, builds, deployments, and environment management across development, staging, and production.
- Delivered frontend and cross-platform applications using Angular, React, Flutter, Firebase, and GraphQL, including NFC-enabled functionality for Goodless and large-scale agricultural advisory features for FarmBetter.
- Mentored junior engineers and interns through code reviews, onboarding, architecture and testing guidance, while helping establish code-quality and engineering standards across the team.

Full-Stack Engineer | **Savanna Dot Net** Nairobi, Kenya | Sep 2021 – Jan 2022

- Built Laravel/PHP web applications and native Android apps that extended the web platform into a cross-platform product.
- Integrated fintech and blockchain features, including NFT support and a trading platform module.

Full-Stack Engineer | **Techxers Kenya Ltd** Nairobi, Kenya | Jan 2020 – Aug 2021

- Built and delivered full-stack web and mobile applications for clients, including **KaziOnline**, **CDL**, and **NeutronIT**, using Laravel, Node.js, React, and relational databases.
- Developed user-facing portals, administrative dashboards, backend APIs, authentication, and database-driven features, contributing across the full application lifecycle from development to deployment.
- Mentored a team of 4 junior developers through code reviews, technical guidance, debugging, and project delivery, helping maintain consistent engineering and code quality standards.

Co-Founder & Lead Developer | **Creators Galaxy Inc** Nairobi, Kenya | Nov 2019 – 2022

- Led development and delivery of multiple mobile games within a five-person team, including **Anarchy** and **Grudge Guess**, building core gameplay systems and backend/game-engine logic using C#, Unity, and SQLite.
- Developed reusable Unity C# scripts, gameplay mechanics, data persistence, and supporting tools across multiple game projects.
- Created and integrated 3D assets, models, and game environments using Blender, including Python scripts to automate and streamline asset creation workflows.
- Contributed across the full game development lifecycle, from prototyping and gameplay implementation to optimization, testing, and publishing production releases.

SELECTED PROJECTS

SmartRunning (Elewa) | *FastAPI, GitHub Actions, GCP, BigQuery, Terraform, Docker, Apache Beam, Flutter*

- AI-powered running and training platform that delivers personalized training plans and coaching based on athletes' activity, performance, and wearable data. Integrates with major sports watches and processes running data through cloud-based pipelines to derive performance metrics, track progress, synchronize planned workouts, and continuously adapt the training experience across iOS and Android.

Pesa Radar (personal project) | *Flutter, Firebase, Hive, Android Native APIs, Clean Architecture*

- Privacy-focused, offline-first personal finance app that transforms M-PESA and bank SMS alerts into structured financial history using a custom transaction-processing pipeline for provider detection, parsing, deduplication, entity grouping, trends, and financial insights, with secure cloud backup.

FarmBetter (Elewa) | *Angular, TypeScript, GraphQL, Firebase, Ionic Framework, Flutter*

- Multi-platform Agri-tech platform designed to help smallholder farmers adapt to climate change, improve productivity, and adopt sustainable land management practices. FarmBetter delivers localized recommendations based on farmers' conditions and supports farmers, extension agents, and partner organizations across 10+ countries, reaching 100,000+ users.

MyBlueprint (Elewa) | *Flutter, Node.js, Firebase, Swift, Kotlin*

- Cross-platform personal growth and productivity platform that helps users turn long-term ambitions into actionable roadmaps, goals, habits, and daily tasks while tracking progress over time. Live on iOS and Android with 30,000+ users.

CERTIFICATIONS

LFS158: Introduction to Kubernetes | The Linux Foundation | 2026

Introduction to Containers, Kubernetes, and OpenShift | Cognitive Class | 2026

EDUCATION

B.Sc. Computer Technology, Maseno University (Second Class Upper Division)

Sep 2014 – Dec 2018

Certificate in Information Technology, Wantech Computer College (Distinction) 2014
